DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-16, drawn to method for calibrating level measurement system, classified in class 702, subclass 55.
- II. Claims 17-21, drawn to level measurement system transmitting process variable data to a remote receiver, classified in class 73, subclass 1.73.

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the method may be used in a system other than for transmitting process variable data to a remote receiver. For example the method may be used in a fuel tank gauge for an automobile.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
